PROJECTS

- **Bill Payment Portal**

In this project I have used the payment module for the easy payment processing. The front end languages used here are HTML, CSS, JavaScript, Typescript, angular and bootstrap. The backend languages used are Java and Nodejs. This is a mobile responsive application. In this application we can process different kinds of payments such as Payment of internet bills, Online payments and Mobile recharge. In mobile recharge we can do both postpaid and prepaid recharge. In internet bill payment we can pay all kind of bills such as wifi bills, E-bills etc. This project was created to make the payment process easier.

- **Flight Booking Application**

Involved in analyzing User Stories.

Participated in Design and Development. Handled UAT deployment and monitoring. Involved in bug fixing and root cause analysis.

- **Evoucher application**

This is a application that is used for purchasing the brand powered evouchers .

The frontend designs are done using the Html , Css, Angular and basic javascript . The Rest api are integrated to the application for displaying best rewards collected using the evoucher.
